ABSTRACT OF THE DISCLOSURE

An information reproducing and recording apparatus compares management information corresponding to the program information recorded on the first recording medium and management information corresponding to the program information recorded on the second recording medium, and determines whether or not the management information on the first recording medium is present on the second recording medium. And then, the apparatus acquires attribute information in relation to the program information in cases where it is determined that the management information on the first recording medium is not present on the second recording medium. And then, the apparatus determines, by referring a database having history information including attribute information in relation to the program information recorded on the second recording medium, whether or not the acquired attribute information is present in the database. And then, the apparatus records the program information recorded on the first recording medium onto the second recording medium, in cases where it is determined that the attribute information is not present on the database.
